

Skins in Counter-Strike: Global Offensive has long been a constant hunt for players. Different skins on weapons that can be bought for real money, some users get through cunning and risky Kraft (or not). For less desperate gamers, CS:GO roulette was born in winter 2015.

This article will describe in detail how to use a particular roulette on the site [csgodouble.com](http://csgodouble.com) to bring the winnings to expensive skins, without giving them a penny. It is worth noting that, despite the fairly simple tactics, as well as a simple device roulette [csgodouble](http://csgodouble.com), some risk it still has (as in any gambling, in fact), so if a player is not ready to part with their gambling property, you should pay attention to other roulette CS: GO.

Please note that using the [Wtfskins affiliate code](#), the balance of the service will be added to the 1000 coins. At the moment, this is the only promo code for the site [csgodouble.com](http://csgodouble.com) from the white list.

Also we advise you to take a look at the topic where the promotional codes for [csgodouble.com](http://csgodouble.com) are distributed.

What do I do on [csgodouble](http://csgodouble.com)?

Many players have long been tormented by the question: how to get original, but from this no less [expensive skins in the CS GO](#), while making the least effort and cost? This is not surprising, because with today's popularity of skins in the game they have become, in a way, the game currency, implemented through barter exchange. As stated above, you should pay attention to the extremely attractive service [csgodouble](http://csgodouble.com). It is no secret that for many users of this site is already familiar, however, it is on it can be guaranteed to lift the real skins for CS: GO.

And so what is this site? It is, in a way, a regular roulette, although it is completely different from those that can be found on [csgofast](http://csgofast.com) and other similar services. roulette [csgodouble](http://csgodouble.com) is more similar to those found in casinos. It's quite schematic, though. And as you know, you don't go to casinos with empty pockets. Therefore, in order not to lose all their blood earned in this roulette, you must already have some valuable items in your inventory.

The essence of roulette is as follows: items already in your inventory are exchanged for points, which act as chips. There are three choices for betting: Red (red) from 1 to 7, Black (black) from 8 to 14 and Green (green) is 0, it's also "zero". A bet made on red or black will be doubled if you win. For example, the player bets 1000 coins on red, if after the roulette spin falls, say, 5 red, so the winnings will be 2000 coins. A similar situation may arise with a successful bet on black.

However, if you take a chance and bet the same 1000 on zero, the winnings will be calculated as  $1/14$ , respectively, will be 14000. However, it should be noted that the principle of all online roulette is carried out at the expense of the random number generator, so any long-term strategy, the purpose of which is the fall of zero, is excluded. Zero can fall out the next back, or after a couple of hours, or even only next month. The probability of getting rich quickly with a  $1/14$  bet is extremely low and only suitable for reckless players or fatalists hoping for luck.
